# User Manual

Welcome to the EasySave software!

This is the main page of the application.

Create a save:

Fill the fields on the bottom with the required information, You can choose between the full and differential saves in the 'type' dropdown.

❖ *Click the '...' button on the right to easily select a folder to copy.*

Finally click 'Add' to add it to the list which is displayed on the table above.

Edit an existing save:

To edit an existing save, double click on the field you wish to change, and replace the text instantly.

Delete an existing save:

To delete an existing save, click the " ❌ " button associated with it.

❖ *You can't delete a save while it is executing.*
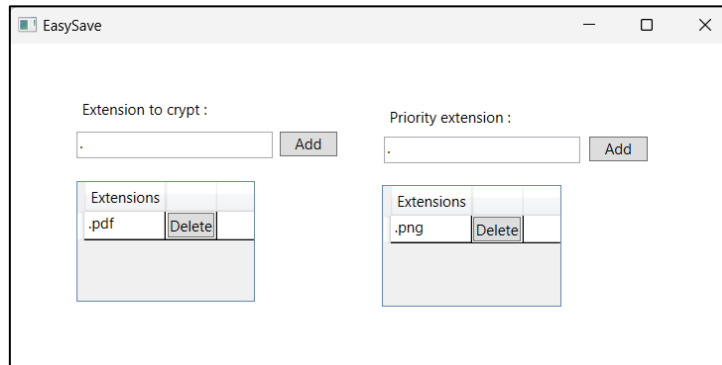

Run an existing save:

To run a, save click the " ▶ " button on the right. Its progression is displayed on the progress bar next to it. You can pause it anytime by clicking the " ⏸ " on the right or you can abort its execution by clicking the " ⬜ " button.

❖ *You can execute, pause and abort several saves at the same time, they are run in parallel.*

The status of the save will update automatically, 'idle' if not active, 'active' if executing, 'paused' if paused, 'aborted' if aborted and finally 'done' when the execution is finished.

When the program detects the use of a specific process running, it pauses all executions until you close the process. The name of this process is displayed in the "status" field

In the "Settings" page, accessible on the top-left corner of the app, you can choose to encrypt or prioritize some files by specifying their extension.

Write the extension in the text input then press 'add' to add it to the list, or press 'Delete', if you wish to no longer have this extension in the list.

The files in the priority list will always be copied first, even if another save is executed at the same time.
